
How to edit questions...

Posted by pjs63 - 2010/11/01 22:58

I've got this component up and running - very nice, looks like it'll do what I want.
I can create a quiz and add questions OK, but I can't find any way of editing questions. The only way I can see to modify a question once it's added, is to delete it and then add the revised version. :(

Hello,

Open 'Components -> ARI Quiz -> Quizzes' page on the component backend, then click 'View' link in 'Questions' column in quizzes data grid, after this you see quizzes questions, click by necessary questions and question edit page is loaded. Edit question and click 'Save' button. BTW, changes will be applied to new quiz session.

Regards,
ARI Soft

Thanks for your rapid response! What's happened is that all my questions are in the form of images, so I didn't put any text into the question box: therefore nothing showed up in the Question column in the Question List. I'd rather not have text in my questions (otherwise I'll have to rework all my graphics, which come from a quiz written in iShell). Is there any way to ID questions without text being visible to the users?

The component trim all HTML tags when shows questions in questions data grid on backend and it doesn't provide ability to display some text instead of question on backend and hide this text on frontend.
