
Adding template styling to module ARI Slider

Posted by littlepi - 2011/03/20 21:43

Is there an easy way to add the template styling from the website's articles to the Module's styling for article display. The styling of the articles, for instance is reversed color type over a dark background, the slider, however displays the articles with a white background and type styling that is different than the main website's styling. I am not an advanced CSS guy, in fact I probably qualify as a beginner with some rudimentary ability to add or revise template CSS code, so any help would be appreciated. Thanks, James.

Hello,

Sorry for the delay. It seems the problem is fixed now?

Regards,
ARI Soft
