
Caption Font Size

Posted by blujean - 2011/04/02 05:15

I've installed a Joomla template that includes Ari slider. I have figured out how to change images, reduce the height of the slider, change the caption content text, and other parameters. But since I changed the height - the captions and buttons are too large for the slider. Two questions:

How do I reduce the font size of the captions?
How do I remove the link buttons?

Thanks in advance for your help!

Hello,

Probably you mean "ARI Image Slider" extension? Could you provide link to page where we can see it?

Regards,
ARI Soft

Thanks for the quick reply. I figured it out.

It was quite simple once I knew where to find the needed scripts.

I had to change the font size and positioning of the captions and buttons in the template's css not the module's.

I also had to make sure my images and the caption background matched the height I designated when I set the ARI image slider parameters in the module manager.

I removed the buttons in the .ini file

The template with the ARI image slider I used can be found here - I reduced the height to 200 pixels.
