images in slider

Posted by twhitmore - 2011/04/21 13:54

_____

Hello,

I have implemented the slider within article on my site and have configured it for intro text and read more link but I wish to add an image from the article as well and I can't figure how to do it.

Please can you help.

Thank you

_____

Hello,

Provide value of "Item Template" parameter from module settings please and specify what image you mean? If this image from text of an article, it should be included into {$introtext} or {$fulltext} predefined variable.

PS: Could you also provide link to page where we can see the slider on your site?

Regards,
ARI Soft

_____

Hi, site is www.henniker-scientific.com

I want to make the slider article text font the same as the header font on the top of the home page and I would like that the sliding articles include an image from the article, but I have no idea how to do this.

Thank you

_____

If you mean font size, add the next CSS rule to "Styles" parameter in "ARI Slider" module settings:

DIV.ari_slider_item
{
 font-size: 1.7em
}

About images, if an article text contains images, it should be shown in the slider. If it doesn't work, could you specify article where you inserted an image and provide temporary access to your Joomla! backend by email that we can investigate the problem?

Regards,
ARI Soft

Re:images in slider

_____

Thanks, I have sent you email with login. You can see which articles were chosen.

Thanks once more

Re:images in slider

_____

"Item template" parameter contains the following values:

{$title}
{$introtext}
Read more...

This code shows article title and intro text, images in your articles are placed into full text. If you want to show full text of the article, use {$fulltext}.

One note, on your site is used "DocMan" and "JoomDoc" extension. "JoomDoc" is based on "DocMan" and they use classed with the same name which can cause conflict.

Regards,
ARI Soft
