
truncating title and introtext not working in J1.7

Posted by outtherechris - 2011/07/27 11:10

Hi sorry to post again but the reply to my previous post is now giving me:

404: Not Found

Sorry, but the content you requested could not be found

can you please post the required code in reply again for truncating title and intro text in J1.7

Thanks
Regards
Chris Lewis

Hello,

Use the next code:

```
{ $title|truncate:10 }
```

Thanks!

Does the same apply truncating the introtext?

Would you be kind enough to demonstrate what I would need to put in the Item Template field to show 1. the intro text truncated to 350 2. a read more link.

I have attached a screen capture of the front end module when i have entered the readmorelink into the Item Template field

Yes, use the next code for intro text:

```
{ $introtext|truncate:10 }
```

Thank you that works perfectly. Though I am still having a problem getting the read more link to show.
I have attached a screen capture of the Item Template field for your info.
Thanks again for the great support.

{`$readmore_link`} predefined variable contains only link, not HTML code. You can use it with custom HTML code that create button or something another. For example you can use the next code:

Read more...
