
Full article in Slider without changing article

Posted by qpidity - 2011/07/28 17:29

Hi,

I'm using Joomla 1.5.23 ARI SLIDER 1.7.8 and I'd like that all of my article is displayed within the SLIDER module but I don't want to have to break my article into an intro and a read more section.

On the Joomla extensions site you say:

"You can display article intro text, full text or other article parameter".

Can you please explain how I can achieve this?

Many thanks

EDIT - Sorry, at first it seemed that I had to split my article with a readmore break, but it now seems to work without having to alter my articles

=====

Hello,

Do you split articles into intro and full text on article edit page or not? If yes, set "Item Template" parameter to:

{ \$introtext } { \$fulltext }

If no, set the parameter to:

{ \$introtext }

Regards,
ARI Soft
