
Double image

Posted by Baloney - 2011/09/22 20:33

I have transparent images. When the second image slides in the first remains on the screen beneath the second image and can be seen beneath it. The temporary site can be seen here: <http://96.125.174.31/~kurtssnow/gatewaymedia.us/>

Hello,

Use non-transparent images with the same size.

They are the exact same size. The picture within the image may look different, but the .png for both images (which includes text as an image) is 900 x 300

"ARI Image Slider" is based on "Nivo Slider" jQuery plugin. Transition effect which is used by the plugin works fine with non-transparent images.

I do not understand your reply. Are you telling me that this is not working because I need to install "Nivo Slider" plugin?

Your images are saved with transparent background and width of real image on the first slide is more than width of real image on the second slide so the first image appears under the second image.
