
Conflicts with Mega menu and more

Posted by Raging Winds - 2011/09/27 20:33

I have tried setting the Include jquery to No, and that fixes some of my problems with my tabs plugin, but it gets stuck in a load cycle, and none of the images appear. I need to either have a way to fix the conflict that I can't find, or find a way to get JQuery to load for it. I have tried SCjquery, and other jquery loaders, but nothing works for it.

site is lustreproducts.com

I solved the menu issue, but, I still have the problem of the images not loading when I have core design magic tabs enabled.

Hello,

It seems this is a problem with loading jQuery library. We suppose 3rd party extensions which cause the issue can't work when several jQuery instances are loaded. Unfortunately we can't open provided link (403 HTTP error occurs). Check it please so we could investigate the issue in more details.

Are you saying the website won't open? It should be fine. I have disabled the slider for now in place of another extension, but I'd rather use yours.

403 error still appears:

<http://www.ari-soft.com/images/fbfiles/images/slider-d484b8d584fab83c8221964c0e664fb4.jpg>

Access can be disabled in .htaccess file, by a addon for web-server or a Joomla! extension.

maybe its my admin tools doing a geographic block. Regardless, I know my Cd magic tabs script is conflicting with the

slider script, because when I set the enable jquery to no in slider, the tabs work fine again, but the images won't load in slider. When I enable jquery to yes, the images load, but the magic tabs stop working. how do I get them to work together? Everything is set to no conflict(so it appears.) At this point it seems I have to choose one extension over another, and I want to use both.

As we wrote previously we suppose tab extension can't work when several jQuery instance is loaded, but it we need to see the problem that have ability to investigate it in more details. If you can provide a link to a page where we can see the problem, could you send tab extension by email that we can try to reproduce the problem on our test server?

Re:Conflicts with Mega menu and more

Posted by Raging Winds - 2011/09/28 16:07

I just sent a link to the download page for the magic tabs by core design.

Re:Conflicts with Mega menu and more

Posted by Raging Winds - 2011/09/28 16:10

I should also note that it requires the core design scriptegrator plugin to work.

I do believe I have solved it. SC jquery to the rescue. I just put the nivo slider code in the custom code area of SC jquery and it works now.

I don't think so. Unless you want to find an alternative for others that don't use or need the SCjQuery plugin. Thanks.

We investigated the issue in more details. As we wrote previously this problem with implementation of CD plugins. They can't work when several jQuery instances are loaded. We sent modified version of CD plugins by email. We modified /libraries/jquery/js/jquery-noconflict.js file in "CD Scriptegrator" plugin and /cdmagictabs.php file in "Magic Tabs" plugin.
