
Autoplay setting ?

Posted by qpidity - 2011/09/29 10:54

Hi,

I've been using ARI Slider for some months and like it's ease of use and the transitions possible, now but the need has arisen to have the slider not play automatically, but instead allow the user to start the presentation themselves. I can't see a setting for this in the module's parameters. Perhaps there is a quick customisation possible or perhaps you have another module that does the same thing but which has this function available ?

Thanks in advance

Hello,

"ARI Slider" doesn't support this feature, but you can be interested in ARI Easy Slider. It supports play/pause buttons.

It would be nice to integrate this feature. Do you plan it?

thanks for this nice slider.

Hello,

"ARI Slider" v. 1.8.0 supports ability to play/pause slideshow mode manually. For this set "Show play/pause buttons" parameter to "Yes".
