
Custom Button to trigger events

Posted by innovationaldesign - 2011/12/15 00:17

hi, how are you doing? here is my challenge

on one page I have two instances of the module (ari slider) running. first of all, because of the our specific setup, the bottom menu are disabled; second of all, as I notice, each slider has their own "left" and "right" button to go forward and backward ... which I need that.

this is what I am trying to do

I am trying to create a set up "left" and "right" buttons somewhere on the page, and I was trying to use these two button to direct turn both sliders at the same time, i.e. when I press the new "left" (or "right"), both slider will receive the javascript command to turn the pages.

i.e. one mouse click to trigger two functions (one for each slider)

here is my problem

I am not able to track down what functions does your "left and right" button trigger

can you help me out? B)

Hello,

If navigation buttons are enabled in sliders (next and prev buttons), the next HTML code can be used to add custom navigation buttons:

Prev Next

I tried, but it hasn't worked yet.

my next questions would be

1) can I place the following code anywhere I want in the page? including outside of the slider div?

2) like I said earlier, I have 2 sliders module going on in one page; and I am trying to create custom buttons to trigger both sliders to slide at the same time, i.e. let say I click on the custom left button, I would like to see both individual sliders to move to their previous slides at the same time; same for the right button

any idea? once again, thank you so much for your help!! :)

We tested provided code on our testing server and it works fine. Provided HTML code can be placed in any place on a page, it just requires that navigation buttons are enabled in sliders. Could you provide a link to a page where we can see sliders and our custom code?

Regards,
ARI Soft

Re:Custom Button to trigger events

Posted by innovationaldesign - 2011/12/15 11:19

oh wait, why this time it works!!????

but I do realize JCE added some extra stuff inside; I copied and paste your code in raw text, then it works

thanks a lot a lot!! :P

happy new year.

first of all thank you so much for your help ... it is working

now I have another question, as you go to this website mvcaog.org , you can see that I am trying to make the

background and the banner change at the same time, it has been working great (by pretty much using all the same settings on both module, especially all the timing)

however, when I start clicking on the left or right, every now and then, I see that the banner and the background start to off sync. It is natural, because they are actually separate element

after playing with them for a while, I start to notice something, whenever I press the left (or right) button, the timer on the banner reset (i.e., let say it takes 6 sec for banner to auto switch; but each time after I change it manually, the timer will start from 0 to count), but the background banner doesn't reset, which is causing them to off sync

is there any way I can make the back slider to do the same as the front, i.e. the timer reset?

It looks like a problem with a 3rd party extension. Could you provide temporary access to your J! backend by email so we can investigate an issue in more details?

Re:Custom Button to trigger events

Posted by innovationaldesign - 2012/01/11 11:22

YES, you fixed it!!!!

what was conflicting with that?

Re:Custom Button to trigger events

Posted by innovationaldesign - 2012/01/11 11:38

ooooooooohhh ... it has to do with that I was trying to make it IE7 and 8 backward compatible at my client's request! Which I remember I didn't quite accomplish that!!

thank you so so so so so much!! Wow, you are GOOOOOD, found that out in such a short time!!!

once again, thank you so so much!

Re:Custom Button to trigger events

Posted by innovationaldesign - 2012/02/12 08:37

Hey, sorry to revive this topic again.

as you know that I did the overlapping banner in order to make a cool looking background changing effect

<http://www.mvcaog.org>

it has been working flawlessly with your help, big thanks! So, I am still trying to make it backward compatible with IE8 or IE7; when I load the page on IE8, I found out, only the back ground banner change (i.e., changing background color), but the front banner stay the same ... is there anyway I can make it work in IE8? if not, what should I do to make only the front banner change instead of the background, so that people can still scroll through and to get information

thx

Ringo

Hello,

The sliders work fine in IE 8 for us. We checked it in IE v. 8.0.7601.17614

Regards,
ARI Soft
