
Ariimageslider.ini part working

Posted by gandalf_le_blanc - 2012/06/26 12:09

Hello all, i have an issue with my module, here you can find my .ini file but when i display the pictures just some of them have a description

Why?

Thanks in advance

The sliders on home page doesn't contain 01.jpg, 02.jpg and ... images.

This problem with file extension of your images. Some of them have .jpg extension and others have .JPG extension (in uppercase). File names are case-sensitive so .jpg and .JPG are two different files.
