## Slider Positioning Issue

Posted by j baker - 2012/06/28 19:13

---

Hello Everyone!

Having an issue with the positioning of our slider, any help on this would be greatly appreciated.

[http://web.ptd.net/Wayne/index.php/properties-for-sale#jans\\_1](http://web.ptd.net/Wayne/index.php/properties-for-sale#jans_1)

^ Website for a Bank

On the left, you see about 50 pixels of white space. The image should be covering that up.

In the article text we have;

```
{arijnewsslider
height="455" width="960"
useJoomlaArticle="true"
showTabs="false"
articleSortField="created"
articleItemCount="3"
articleCatId="29"
showNextPrev="true"}
{ariarticletemplate}
{$introtext}
{/ariarticletemplate}
{/arijnewsslider}
```

If you look at the Element in Firebug, you will see;

If you change 1016px to 960px in Firebug, the slider is positioned correctly.

Again, any help on this would be awesome.

Thank you.

Hello,

Add the next CSS rule:

```
DIV.ariNewsSlider .ariNewsOverlay
{
margin: 0
}
```

Regards,  
ARI Soft

That simple, ey? You are fantastic! Thank you!

I have one other question (for now).

As you can see on our Locations pages, the main content falls behind the main menu which gives a nice transparent effect.

I struggled with proper css positioning to get the same effect with the Slider page.

Would you have a good idea on how to achieve this?

Thanks again!

You can try to use semitransparent PNG image as background for the slider.

Thank you again, however, the following CSS fixed my issue;

```
.ariNewsSlider {  
    margin: -15px 0;  
}
```

I now have the top part as transparent.
