## Adding Height and Width to Images

Posted by darrenqbg - 2012/09/26 13:05

---

Hi All, I'm trying to find a way to add the height and width tags to the images in image slider. Does anybody know how to do this and which file needs to be edited?

Thanks in advance.

Hello,

Do you mean "ARI Slider" or "ARI Image Slider" extension?

See "prepareSlides" method in  
\\modules\\mod\_ariimageslider\\mod\_ariimageslider\\kernel\\ImageSlider\\class.ImageSlider.php file.

Thanks for the advice. I am a little confused as to which parts and how to edit the file. I have 4 images and they are all the same size, 980x300.

Thanks again

See the following code:

```
if (!empty($slide)) $imgAttrs = $slide;
if (!empty($slide)) $imgAttrs = $slide;
```

I've found those strings but how and where do I add the height and width,do I need to fill in each part and do I have to remove brackets. Can you give me an example of the completed file for my images of 980x300?  
Thanks

---

If you want to use hardcoded values for width and height parameters, use the following code instead of previous one:

```
$imgAttrs = 930;  
$imgAttrs = 300;
```

I've tried this but it doesn't seem to work. Where should I put this code and should it be pasted exactly as it is? Is there a chance you could send me the file with the code inside?  
Thanks in advance
