
Possible changes?

Posted by lavaground - 2013/05/29 12:55

Hi Ari-Team,

is it possible to do following changes:

- Custom date/time format for the variable {\$created}
- Custom query for article sorting, e.g. from my query.php of the blog view:

```
case 'today' :  
    $queryDate = ' CASE WHEN a.created >= ' . $db->Quote(JFactory::getDate(date('d.m.Y', strtotime('now')))->toSQL()) . '  
THEN 0 ELSE a.created END '  
    break;
```

blog.xml:

```
JGLOBAL_USE_GLOBAL  
JGLOBAL_CREATED  
Today's Date as Start  
JGLOBAL_MODIFIED  
JPUBLISHED
```

As you can see, it checks for createdate = today and starts with it, otherwise it just displays order by createdate

- And the last one would be:

Could you tell me the .js code handling the navigation prev and next button, so i can make one nav for two sliders?

Thanks in advance ;)

Hello,

1, Use "date_format" filter. For example {\$variable|date_format:%b %e, %Y} value. You can find possible variants of data formatting string [here](#).

2. The extension doesn't support this ability.

3. We can send original version of javascript file which is used by the extension by email.

Regards,
ARI Soft

Hi there,

thanks very much ;)

1. works like a charm, a simple d.m.Y was enough no % needed

2. If you could point me to the part of code i could do it my self, did it for joomla, too ^^ it's nice because there is no need for com's mod's plg's for events, i just use the blog feature, its to make articles available even if date is passed, publish up/down isn't the best solution..

3. Yes please ^^ just send it to my profile email

2. If you use Joomla! 1.6+, see "getArticleList" method in
modules/mod_arislider/includes/kernel/Articles/j16/class.ArticleController.php file.

3. Find jquery.slider.js file in install/source folder from mod_arislider.zip archive.

Regards,
ARI Soft
