## Just to report Joomla 3.5 and ari imageslider

Posted by kman - 2016/03/30 07:39

---

Hi, few days ago i updated automatically to j 3.5 but then the first pages in languages where was set to show the image slider got not available. just blank white page.. after attempt to put this slider on another page i noticed that the new set page displays blank too SO i discovered where is the problem.  
Now i have disabled the plugin so all works normal.

Should i try with your last version of the slide or to look for alternative one? it worked fine and i was happy with it.

Regards  
KK

Hello,

"ARI Image Slider" v. 2.2.0 is working fine with Joomla! 3.5. It is available here.

OK, now that we reached 3.5.1, I got the next problem. The slider just shows the loading sign, nothing more! Any ideas?

It seems this is a conflict with 3rd party extension or site template. Usually it occurs when an extension loads own copy of jQuery library instead of using instance of jQuery library which is loaded by Joomla! We can investigate the problem in more details if you send a link to a page where the problem occurs.
