# Ari Slider ver 2.2.1 missing Nivo Slider
Posted by Stuckshutter - 2016/04/25 14:23
_____

I upgraded to 3.5.1 and the trusty Ari Slider quit working.
I downloaded ver. 2.2.1 (verified it in the manage extensions that it did install) and get the error message
TypeError:$(...).nivoSlider is not a function.

How do we fix that? Right now, it is prominently missing on a live site.

FYI: The images are in the directory after the update and change to 3.5.1 so all the config is there, it just seems
something is missing from the plugin??

Would appreciate your help as soon as possible.
Thanks

Hello,

It seems this is a problem with a 3rd party extension (or site template) which loads own copy of jQuery library instead of
using instance of jQuery which is loaded by Joomla! Can investigate the problem in more details if you provide a link to a
page where the problem occurs.

The problem occurs on http://www.oedreps.com/ home page.
Thanks

_____

jQuery library is loaded at least 3 times on the page. One time by Joomla!, one time by "easytabs" extension and a some
extension or site template loads one more instance of jQuery.
