
Loading another set of images

Posted by marcmarc - 2016/06/07 11:43

Hi,

I would like to load images, according to the screen resolution, from 3 repertories, each one with the same set of images but at different resolutions.

Is it possible ?
thanks

Hello,

The extension doesn't support this ability. A possible solution is creating 3 module instances, load them in the same module position and hide two of them based on custom CSS rules which will use media queries.

but with the media queries the images of the 3 modules are all loaded and this is even worse from the perspective of time loading and processor load.

what I would like to achieve is to load a set of small resolution images for mobile use, regular for standard screens width and big for big screens.

any ideas?

thanks
