Issue with PHP 7.1
Posted by crimle - 2017/04/24 20:06
_____

Hi there

ARI Image Slider 2.2.0 produces the follwing error message
"Warning: A non-numeric value encountered in
/public_html/modules/mod_ariimageslider/mod_ariimageslider/kernel/class.AriKernel.php on line 16"

This happened after switching to PHP 7.1.
Everything was all right with PHP 7.0.

Kind regards
Christof

_____

Thank you. There is version 2.2.2 in your download section. Where can I find version 2.2.3?

_____

Unfortunatley, version 2.2.3 does not resolve the issue. The error message now is

"Warning: A non-numeric value encountered in
/public_html/modules/mod_ariimageslider/mod_ariimageslider/kernel/class.AriKernel.php on line 17"

_____

Could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can check the problem?

Regards,
ARI Soft

_____

The problem is: this website is live and therefore I immediatly had to switch back to PHP 7.0. I could send you URL and credentials to the backend. But you would not see the error message any more.

I attached a screenshot of the file that causes the error. Does this help? Or would you like to login to the backend anyway?

Kind regards
Christof

_____

We need have access to backend of site where the problem occurs because we can't reproduce it on our test server. We checked it on PHP 7.0 and 7.1.1.

Regards,
ARI Soft

_____

I sent you the credentials by email. Please act as soon as possible since this is a live website and I do not want to display the error for a long time. Thank you.

By the way:
PHP-Version is 7.1.4 and the error occurs with all of my websites.

Kind regards
Christof

_____

I am impressed, thank you very much. But what on earth did you do? I have a couple of other websites with the same issue.

_____

ini_get('error_reporting') PHP code returns a non-numeric value, we replaced it with error_reporting() PHP function. The module was updated, download it again from our site.
