Problems with image not showing
Posted by jonathn - 2017/04/25 04:53
_____

Using latest version of mod_ariimageslider on a joomla 3.6.5 installation I upgraded from 3.1.1.

I am using one template and on the homepage the slider is not working.

I am only using 3 extra mods:

ariimageslider
mod_artsexylightbox_lite_edition
mod_rapid_contact16

the site is: http://ninav2.net-e-fx.com/

Any suggestions?

Thanks

Hello,

The problem occurs because jQuery javascript library is loaded several times on your site (by Joomla and twice by your site template). Load it only once. This problem can be resolved with "Easy jQuery" plugin.

Thanks for the quick response.

Problem is now... I've always had a problem getting jquery easy to work.

always problems with the config.

wish there was a quick and easy config that would work to resolve this problem

Thanks

We can help to configure it if you provide a temporary access to your J! backend by email.

Regards,
ARI Soft

sure - where do I send the info? I take it you need super user access?

Thank you in advance!

wow! fabulous.... looks great

Now I wonder what you did!

Thank you so much!

_____

We configured "Easy jQuery" to Exclude loading jQuery library by your site template and set it to load jQuery only by Joomla!

Regards,
ARI Soft

thank you again!

Nice to have a working config on easy jquery
