
Please explain how, not just 'what'.

Posted by Internaut - 2019/04/25 16:20

The documentation is great - IF one knows what "Use "System - ARI Layer Slider" plugin to load a slider via a plugin code." Is there documentation that shows how, not just what?

And, please explain how, or where we put the command "System - ARI Layer Slider" - for example, do we put "System - ARI Layer Slider" text (with or without the quotes???) on a line where we wish the slider to appear? I tried this and got a blank page with a error 404.

Hello,

The following shortcode is supported by "System - ARI Layer Slider" plugin to embed the particular slider into content:

```
{arilayerslider id="SLIDER_ID"}/arilayerslider}
```

Just replace SLIDER_ID with ID of the slider which want to embed. For example:

```
{arilayerslider id="2"}/arilayerslider}
```

Regards,
ARI Soft
