
Themes + Article parameters

Posted by 6degrees - 2010/08/28 21:23

Hi,

I just purchased this component and it does in fact look promising.

However, it's not quite like the demo adverts ?

- 1) There is not place to select a theme like there is in the demo (you have a drop down in there that would be nice to have!
- 2) There is no way to set the module to read all articles of a category or section like the "article parameters" JPG in your demo.

Perhaps i'm doing something wrong ?

Please advise,

Danny

Hello,

It seems you bought incorrect extension. ARI Easy Slider provides different themes and can select articles from categories and sections. ARI Slider extension provides possibility to set necessary articles one by one, it doesn't provide ability to select articles from category or section.

Regards,
ARI Soft
