ARI Slider: Articles with several images?
Posted by scharfet - 2010/11/12 10:29
_____

Hello,

I'm very interested in this Module but before I'd like to ask some questions I have:

* This module works with articles which have different layout and several images? This module is not only a news slider which uses only the text of each article but also the layout and images, right?

* Do you think that it would be possible to use up to 20 articles with 50kb each? (each article has 2-3 fotos)

Hello,

Thank you for your interest in our product. Regarding your questions:

1. The module provides possibility to use some predefined variables that build slider items content. The following variables are available:

  * {$id} article id;
  * {$title} article title;
  * {$introtext} article intro text;
  * {$fulltext} article full text;
  * {$created} article created date;
  * {$modified} article modified date;
  * {$hits} article hits;
  * {$readmore_link} link to article page.

The module uses {$introtext} by default. It means that the module shows article intro text by default.

2. It's possible, but if a user has a low speed connection it will take time to load the page.

Regards,
ARI Soft

I'm not totally sure about the following variable.

* {$fulltext} article full text;
"Article full text" includes also all images, css, and tables? Or it uses only the plain text?

Thank you
Hannes

_____

It's included HTML code of article. If you use WYSIWYG editor you can switch it to plain text mode in existing article and see HTML code of article.
