
ARI Slider off the edge of the page. Help

Posted by thehotrod - 2010/11/22 04:34

I've been trying to use the AriSlider on my site, but the images are stuck way over to the right. Now that I've added a right image to my template, the Ari Slider is really small.
Can someone look at it and help me out??

Thanks so much. I'm pulling my hair out.

EDIT. Nevermind. I figured it out. My logo was causing some problems.

Hello,

Is the module working without problems now?

Regards,
ARI Soft
