Lightbox drifting in iPhone Safari browser

Posted by eric - 2011/01/20 17:34
_____

I easily was able to install and configure Sexy Lightbox. On my iPhone's safari browser the lightbox is displayed but as soon as I do any resizing it drifts away. Are there any settings to prevent "drifting"?

Here is a link to my test page with some thumbnails in it.

Hello,

Unfortunately we can't check it on iPhone, but in iPhone emulator it works fine. You can try to set "Resize duration" parameter to "1" and "Shake distance", "Shake loops", "Shake duration" parameters to 0".

Regards,
ARI Soft
