
Example code to load a swf. file

Posted by buckrobbie80 - 2011/01/28 22:09

Could anyone please give me Example code to load a swf. file from my windows hosting I want to place an image in a joomla article that when clicked loads the .swf in a sexy light box frame.

Thanks in advance for your help any help will be appreciated.

Rob

Hello,

If you mean "System - ARI Sexy Lightbox Anywhere" plugin, from "ARI Sexy Lightbox" package, use the next code:

```
{arisexylightbox activeType="rcontent" width="792" height="294" url="LINK_TO_SWF_FILE"
title="Video"}{/arisexylightbox}
```

Where LINK_TO_SWF_FILE is link to SWF file which you want to show and LINK_TO_IMAGE is link to image what will be used as preview for SWF file.

Regards,
ARI Soft

Hi,

Do I have to use the same code if I want to open the video popup by clicking on an image from a module (mod_costum)Because when I do this from a article, it works fine, but not when open from de mod_custum module

Regards

Hello,

Open "System - ARI Sexy Lightbox Anywhere" plugin settings page and check that "Mode" parameter is set to "Anywhere".
