
Flickr images are 50px when displayed in lightbox

Posted by olgascreations - 2011/01/31 02:46

Hi,

I just installed the module and Anywhere plug ins. I got it configured properly, tied into my Flickr page and it is pulling the thumbnails for the photoset just fine. This is currently being displayed as part of a category.

When I click on a thumbnail and the lightbox opens the resulting image is maybe 50px. I have tried all of the imgSize values and they have no effect.

The code in the editor is:

```
{arisexylightbox activeType="flickr" source="photoset" photosetId="72157625942760998" imgSize="large" showTitle="0"}{/arisexylightbox}
```

Here is a link to see the issue:

http://olgascreations.com/joomla/index.php?option=com_content&view=category&layout=blog&id=37&Itemid=56

If i use the Module directly everything works just fine as you can see in the above link.

Any prompt help would be greatly appreciated.

I solved this by changing the scope from Content to Anywhere.

Hello,

It is strange, code from your first post works fine on our test server. If you prefer to specify image size as attribute in {arisexylightbox} tag and it doesn't work, you can provide temporary access to your Joomla! backend by email and we will investigate this problem.

I know this an old thread, but to get the {arisexylightbox} working at all with my flickr photo sets I had to make the change as above, change the scope to Anywhere.

With the scope set to Content it would work with the Youtube example in the help, but when I tried the Flickr code nothing would appear on the page at all.

Hello,

"Content" mode means that the plugin will work only in Joomla! articles. "Anywhere" mode means that it will work in any Joomla! content. The mode doesn't affect on YouTube or Flickr functionality.
