
Heading Display

Posted by carlbryanmusic - 2011/03/21 01:46

My apologies if this has been posted before (I searched but did not find anything), or is beyond simple and I'm at the wrong end of a long design session.

I'm using the lightbox anywhere plugin (joomla 1.6), and everything seems to be working fine except I'm getting a heading at the top of a linked article that I can't seem to control.

I've used the command `{arisexylightbox moduleId=""}/arisexylightbox` and it successfully displays my link as well as successfully bringing up the linked article in the lightbox module.

At the top of the light box article I get "Articles" in what appears to be an H1 heading, but I can't seem to control it with any parameters within the plugin, or the module.

"Articles" is not a category I use (other than the root) nor is it defined anywhere by me.

The only reason I'm doing that in the first place is because for some reason the command: `{arisexylightbox activeType="article" width="300" height="250" id="5" link="Show article" title="Article"}/arisexylightbox` doesn't seem to be working at all for me. I'm using the correct I.D. number, but nothing displays in my article at all, no link, nothing.

Thanks for the help if anyone can lend me quick hand with this, I'd really appreciate it. :)

As a brief follow up, what would be the simplest way to attach this type of link to an image, instead of the entered link text in the parameters?

Hello,

Could you provide link to page where we can see described problem?

You can use the next code that use image as link instead of text:

```
{arisexylightbox activeType="article" width="300" height="250" id="5" title="Article"}/arisexylightbox
```

Where LINK_TO_IMAGE is link to image.

Regards,
ARI Soft
