
(SOLVED) Content margins inside sexylightbox

Posted by rexous - 2011/03/28 17:36

Hi,

I use fancy white sexylightbox theme. My problem is that I cant find the right spot in the sexylightbox.css where I can set margins to the content inside the box.

At the moment the margins seem to be 5px I want them at 20px to the left and 20px to the right so that my (text) content doesn't come so near the sexylightbox edge (borders).

Any help will be highly appreciated.

Hello,

Do you need it only for inline content or for all content types (images, remote pages)?

More info: I use sexylightbox everywhere syntax since I load a custom html module. It is inside this module I have my text (content). Module with id 166

```
{arisexylightbox activeType="module" width="800" height="550" id="166" link="Bla bla bla" title="Bla bla bla"}{/arisexylightbox}
```

And of curse when it popups up my text (content) is way to close to the edge of the sexylightbox window.

Download and upgrade "ARI Sexy Lightbox" module. After this use the next CSS rule that add padding for inline content:

```
DIV#SLB-Image  
{  
padding: 0 20px;  
}
```
