
Joomla 1.6.1 behaviour

Posted by fleblc - 2011/04/05 07:53

Hello, I am Using Joomla 1.6.1 and some tetst with ARI Sexy Lightbox:

1) I wrote the following code in the article to show google main page.

```
{arisexylightbox activeType="rcontent" width="300" height="250" url="http://www.google.com" link="Show google site" title="Google"}{/arisexylightbox}
```

but I get Error 404: "The requested URL /?TB_iframe=1&width=300&height=250 was not found on this server. Thatâ€™s all we know."

You can see it under: <http://www.cbpozuelo.es/contenidos/index.php/como-llego-a-mi-partido>

2) I wrote the following code in the article to show YouTube video.

```
{arisexylightbox activeType="rcontent" width="800" height="450" url="http://www.youtube.com/watch?v=WyA1dzfKywg" link="YouTube video" title="Video"}{/arisexylightbox}
```

but the video is not showing in a new pop up window.

See it under <http://www.cbpozuelo.es/contenidos/index.php/enlaces-basket/acb>

Thanks

=====

Hello,

1. If you use this code only for testing purpose, enter another url, for example <http://www.yahoo.com> instead of <http://www.google.com>

2. Open "System - ARI Sexy Lightbox Anywhere" and "System - ARI Sexy Lightbox" (if you use it too) plugin settings, check that "Include jQuery" parameter is set to "Yes" and click "Save" button that re-save plugin settings. It should help.

Regards,
ARI Soft

Hello

All jQuery were already to 'yes'

I set the "Mode" to "Any Where" in ARI Sexy Lightbox Anywhere plugin and now It works perfectly.

How can I get the same operation but in the menÑÑ links above (not inside the article content)?

Regards

If you want to attach the lightbox to menu items, it can be done with help "System - ARI Sexy Links" plugin. It requires a little knowledge of CSS selectors. If you have any difficulties with it, you can specify what menu items do you want to assign with the lightbox and we will help to configure the plugin.

Regards,
ARI Soft
