File does not exist

Posted by freeride - 2011/04/06 08:53

_____

This is a serious problem. I'm using sexylightbox on few websites with SEF links and I'm receiving tons of errors on my server which is overloaded with wrong links to button files and other. The script does not seem to work properly with SEF and is not taking the files from the main path.

Is there any way of getting this one sorted? Due to the heavy load in generates my hosting company will probably take down my websites anytime soon now... Please help

  File does not exist:
 /users/XXXX/www/DOMAIN_NAME/MENU_ITEM/SUBMENU_ITEM/modules/mod_arisexylightbox/includ
 es/js/sexyimages/fancy/fancy_close.png

_____

Hello,

Could you provide link to page where these errors occur?

Regards,
ARI Soft
