

Sexy Lightbox Links

Posted by axdrell - 2011/04/18 18:26

Hi,

I am using a .csv file to include additional file information for images that are being loaded from a specific directory. Each line of the .csv file has a link for each image. When I click on the image displayed on the pop up, the window opens on the parent window instead of a new window. I want the link attached to the image to pop up on a new window. How do I do that? I tried adding the anchor to the csv but it still does not work.

Please help.

thanks.

Hello,

Could you provide link to page where we can see the problem and CSV file? If it is private, you can provide it by email.

Regards,
ARI Soft

Thanks. Currently the extension doesn't provide ability to show associated link in new window, but we will try to add this feature within 24 hours.

We have updated the extension. Download and upgrade "ARI Sexy Lightbox" module and "System - ARI Sexy Lightbox Anywhere" plugin. New version provides new parameter "Image gallery -> Link target". Set it to "New window" that open links in new window.

Hi,

I would like to have page navigation for the arisoft gallery images I am posting. For example, if I post 100 images I want to display 20 per page. How do I configure that? I tried looking into the module settings but did not find any place to change it other than items per row. Please let me know.

thanks.

Hello,

The extension doesn't support paging, but you can create several articles, load necessary images in created articles with help "ARI Sexy Lightbox Anywhere" plugin and use standard Joomla! navigation between articles.
