## google adsence inside arisexylightbox anywhere!

Posted by chakkaramole - 2011/04/27 05:01

---

I am using arisexylightbox any where to show my popup video in light box. I wonder is there any way I can show google adsence inside the light box.

I suggest you can give us 4 inputbox(top,left,right,botton) in the backend where we will enter adsence code. So we can place adsence or other html tags inside the lightbox. Some other extension developers who provide this facility is jcomments.

Hello,

You can create an article, place code for Google AdSense and YouTube video in this article and then load created article into lightbox instead of loading only YouTube video.

Thanks for your suggestion. I request these feature because I only need to show the you tube video links in the article rather than creating a separate article and again link that article to this which is very time consuming. Thank you for your understanding

You can create one article, add Google AdSense to it and create placeholder for YouTube video. Then you can create link to this article and send link to YouTube video with help request variable and use DirectPHP that parse link to YouTube video. It requires a little PHP knowledge.
