Can not find the script conflict

Posted by mirko.herrmann - 2011/05/13 23:00
_____

I try to use the ARI lightbox here:
http://www.meine-internetfiliale.de/webhosting/umzugservice/providerwechsel.html

There has to be a script conflict, but I am not able to solve it.
I activated the ARI module published to debug position. The result is, that the page is not shown anymore. But you can have a look at the sourcecode.

I am using a rockettheme template using rokbox (mootools).

Please help! Thank you so much.

Regards/Mirko

Hello,

This problem with extension which is used for optimization loading of javascript files. It can't handle including of remote javascript files correctly. We have sent instructions how to fix it by email.

Regards,
ARI Soft

It seems the lightbox works fine in all browsers except IE. In IE page doesn't show due to the next code in HTML source of the page:

Because of your hint to the optimization plugin I was able to solve the problem. Thank you so much. I created two screenshots for explanation.
