
Sexy Lightbox in virtuemart product page

Posted by artisan - 2011/05/15 21:05

Hello, we are going to use this in one of our sites which sells dvd's. and we provide a video preview, I guess we will use .flv for our files, did a test using plugin from an image, brought up popup of video and started, but will not render or find the video, because it searching within virtuemart component, says stream not found, and searching in = www.xxxxxxxxxx.net/component/virtuemart/http://www.xxxxxxxxxx/video/my-file-link.flv, clearly not calling the correct link, any ideas on how to work within a virtuemart product page ? thanks....

Hello,

"System - ARI Sexy Lightbox" or "System - ARI Sexy Lightbox Anywhere" plugin can be used. For "System - ARI Sexy Lightbox" plugin, code looks like:

If you prefer use "System - ARI Sexy Lightbox Anywhere", set "Mode" parameter to "Anywhere" in plugin settings and use the next code:

```
{arisexylightbox activeType="rcontent" width="792" height="294" url="/components/virtuemart/video/my-file-link.flv" title="Video"}{/arisexylightbox}
```

If something doesn't work, specify what code you use and provide link to page where we can see a problem that we can investigate it. If it is private data, you can provide it by email.

Regards,
ARI Soft
