SEF

Posted by elehost - 2011/05/17 15:57

_____

Hello,

When I used the plugin lightbox to add a link like the one below it does not use the SEF url when loading the article.

{arisexylightbox activeType="article" width="750" height="500" id="57" link="Employment Service" title="Employment Service"}{/arisexylightbox}

Is there a way to get it to use the SEF url from the menu for the article instead of the direct link?

Thnaks

_____

Hello,

It requires to enter menu item ID (Itemid request variable) that use SEF link from menu because it is used by Joomla! that get menu alias. If you wish, we can extend plugin functionality and add possibility to enter "Itemid" in {arisexylightbox} tag.

Regards,
ARI Soft

Thanks for your reply and help. Much appreciated!

Would you please share with me a sample piece of code for how to link it to the menu using the above plugin?

Sorry for delay. We have investigated the problem more deeply. It doesn't possible to use SEF link in described way, but you can use it as remote page. For example if SEF link looks like my-page.html , use the next code:

{arisexylightbox activeType="rcontent" width="750" height="500" url="my-page.html?tmpl=component" link="Employment Service" title="Employment Service"}{/arisexylightbox}

Thanks for your reply and help.

That is diasspointing the router for SEF can not be activated in the plugin rendering of these pages.

I will try the other method but it opens the possibility for nore broken links.
