module image link to open a module

Posted by sturdyboy - 2011/05/17 16:13

_____

Hi there,

I have an image in a module at the top of my site that I want to use as a lightbox for a contact form (which is a module as well). but I can't seem to get it to output a link correctly.. Could you give me some pointers please or tell me if its even possible.

Thanks

Rich

_____

Hello,

If you want to show a module in the lightbox when a user clicks by an image, it can be done in several ways:

1. Use "ARI Sexy Lightbox" module, set "Choose type" parameter to "Module", enter necessary module in "Module -> Module" drop-down and enter the next code in "Module -> Link text" parameter:

Where LINK_TO_IMAGE is link to necessary image.

2. Use "System - ARI Sexy Lightbox Anywhere" plugin. Code will look like:

{arisexylightbox activeType="module" width="300" height="250" id="MODULE_ID" title="Joomla! module"}{/arisexylightbox}

Where MODULE_ID is ID of module which you want to load.

If something doesn't work, provide link to page where we can see it please because it can be a problem with module which should be loaded into lightbox.

PS: If you wish, you can describe what module do you want to show in the lightbox and provide temporary access to your Joomla! backend by email and we will help to configure the extension.

Regards,
ARI Soft

_____

Here is the code I used:
{arisexylightbox activeType="module" width="300" height="250" id="132" title="Google Map"}{/arisexylightbox}

Module is jMap to show Google Map.

When I place this code, It even hides image some way.

Here is the link, where I am trying to use it:

http://hrmuae.com/film/index.php?option=com_content&view=article&id=10&Itemid=13&lang=en

_____

Hello,

Could you provide link to page where we can see the problem? BTW, if a javascript conflict occurs, the module which you want to load into lightbox can be embedded into an article with help "Content - Load Module" plugin and then load created article into lightbox.

Regards,
ARI Soft
