
Different galleries in different articles

Posted by chadmichaelfoster - 2011/05/20 04:58

I have read through many of the articles and am still sort of stuck. I can figure out how to get one directory to show up in every article but I cannot seem to get them to only show up in chosen articles and with the respective gallery. As per a discssion below I have tried using

```
{arisexylightbox activeType="imglist" dir="images/testpics" thumbWidth="100"}{/arisexylightbox}
```

And all it does is display this code on the page. Any suggestions? The plugin is enabled.

Hello,

If you use a WYSIWYG editor, switch it to plain text mode before inserting plugin code because editors can add extra HTML code or encode inserting code.

Thanks...one other quick question....If you go to

http://chadmforster.com/index.php?option=com_content&view=article&id=56&Itemid=130

Am I missing an obvious reason why there is white on both sides of the new thumbnail. I obviously would like it to be black like the rest of the background.

Thanks

White background is not part of extension's code. You can see it on screenshot below:

<http://www.ari-soft.com/images/fbfiles/images/lightbox-9178d41f851eff8d2687dfad0995b450.jpg>

This background is defined for container element. It seems this was created by editor.
