## Background Color Override

Posted by alexmartin - 2011/05/26 17:33

---

Using Lightbox anywhere.

I have one color set in admin for pop ups- black.

But i also want to have white background. What should i add in the plugin tag to override Background color in a specific instance?

Looking forward for your recommendation.

Thank you

---

Hello,

Add `opt_color="white"` attribute to `{arisexylightbox}` tag.

---

I did tested your recomendation and it does not work. One detail:

```
{arisexylightbox opt_color="white" activeType="icontent" width="300" height="250" title="Hidden text"} {link}/{link}
{content}Inline content which you want to show in sexy lightbox goes here.{/content} {/arisexylightbox}
```

---

The code will not work if another extension's instance with another theme is used on a page or "System - ARI Sexy Lightbox" plugin is used and has "Order" parameter less than "Order" parameter of "System - ARI Sexy Lightbox Anywhere" plugin.

This parameter you recommended changes frame color and Not the background.

May be you have parameter for background?

---

Here is the page: [http:](#)

Here is the code:

```
{arisexylightbox opt_color="white" activeType="icontent" width="300" height="250" title="Hidden text"} {link}/{link}  
{content}Inline content which you want to show in sexy lightbox goes here.{/content} {/arisexylightbox}
```

I need Frame to be black and Background to be white as the page. This is inline content.

Looking forward for your solution. I love your component and plugins.  
If needed i can connect with you live via Skype or phone or provide screenshots.  
I probably can not provide you with admin access.

Thank you very much.

---

Add bgColor="#FFF" attribute. The code will look like:

```
{arisexylightbox bgColor="#FFF" opt_color="black" activeType="icontent" width="300" height="250" title="Hidden text"}  
{link}/{link} {content}Inline content which you want to show in sexy lightbox goes here.{/content} {/arisexylightbox}
```

Ari soft,  
That works well. I love your support. Thank you VERY VERY much.

Do you mind if i ask you one more question?

Is it possible to make Pop Up window to pop up with some delay? Like 30 seconds after some one open the page?

Thank you.

---

Do you mean "Auto open" feature?

---

ARI Soft

=====

## Re:Background Color Override

Posted by alexmartin - 2011/05/29 11:16

---

Yes, "Auto open" feature with Delay , so the pop up window opens after 30 seconds, 40 seconds, a minute, or a 15 minutes.

---

Download and upgrade "ARI Sexy Lightbox" module. New version contains new parameter "Auto show delay".

---

Is it possible to set delay parameters and remote url page on the front end, to override the module?

=====

## Re:Background Color Override

Posted by admin - 2011/05/31 06:26

---

Could you explain where do you want to change the parameter?

---

My challenge is to provide front end users with capacities of Module and Plugin to be able to Pop Up

How users of my site should be able to adjusts module parameters : autoShow delay, On Exit, Remote content page, Inline content, pop up window width/height

Is it possible with plugin? Or with a module?

I believe your software is capable to adjust all params by front end users.

I need to know how to provide them instructions with examples.

---

If you mean "System - ARI Sexy Lightbox Anywhere" plugin, use the next code:

1. Auto-show lightbox on page load with delay 5 sec:

```
{arisexylightbox activeType="icontent" width="300" height="300" autoShowDelay="5" autoShow="1" link=""}  
Test content  
{/arisexylightbox}
```

2. Auto-show lightbox on page load only once with delay 15 sec:

```
{arisexylightbox activeType="icontent" width="300" height="300" unique="lightbox1" autoShowDelay="15"  
autoShow="first" link=""}  
Test content  
{/arisexylightbox}
```

3. Auto-show lightbox when a pge is leaving:

```
{arisexylightbox activeType="icontent" width="300" height="300" showOnClose="1" link=""}  
Test content  
{/arisexylightbox}
```

PS: "unique" attribute - unique key, this parameter is required only if you set 'autoShow' or 'showOnClose' parameter to 'first'.

Thank you very very much for the provided above code.  
Here is one small challange i have

---

This code pop up Home page instead of the page it should. I am not sure what is the problem can be.

```
{arisexylightbox activeType="rcontent" width="300" height="600" autoShowDelay="5" autoShow="1" link="http://"}{/arisexylightbox}
```

=====

## Re:Background Color Override

Posted by admin - 2011/06/02 04:16

---

Use the next code:

```
{arisexylightbox activeType="rcontent" width="300" height="600" autoShowDelay="5" autoShow="1" link="" url="http://6fiu.com/el/1/64-e/111-oleg/427-earnings-disclaimer"}{/arisexylightbox}
```

Regards,  
ARI Soft
