
Lightbox Colors

Posted by anjumraheel - 2011/06/03 18:19

Hi,

Apparently it provides only two options for popup windows. Black & White. Is it possible to use any other color for text, background etc.?

Thanks!

Hello,

Background color and color of overlay can be changed in extension's settings. If you want to change existing theme or create new, we can provide PSD source files.

Regards,
ARI Soft

That would be great. Kindly do provide that.

I am just curious why are you not doing it in the standard version for providing extra flexibility to the users. Isn't it a bit limiting to have two colors only?

The extensions are used images for borders and buttons. It requires to change images that change color theme.

PS: Provide your order number by email and we will send PSD files.

I am using the Light/free version for the time being to evaluate before moving on to licensed version.

For free version you can change CSS files and images in the next folder:

/plugins/content/arisexylightboxlite/js
