
How to close lightbox when user clicks away

Posted by savager - 2011/06/24 06:00

Most lightboxes out there close when the user clicks elsewhere on the screen. I have seen some users have got this to work with their ARI sexy lightbox installations, but for the life of me - I can't seem to get it to do that!

Please tell me what I have to do to make it behave this way?

Thank you so much!

Hello,

Set "Modal mode" parameter to "No".

Regards,
ARI Soft
