
Ltbox Keeps Say \"Plug-in Missing\" In Popup Window

Posted by mba90008 - 2011/07/08 08:17

Hi...

After installing SLBx Anywhere Pkg....I loaded some youtube vids as a test and added the vid links to an article...everything appeared to work fine. I then went and began copying the SLBx mod and added additional vids and links to the same article (40 in all)...after all that individual loading I went to test the vids...a few played but most didn't....after refreshing the page...they all stopped working and the popup window kept showing: "Missing Plug-in".

I've disable and reenable the all the plug-ins from the pkg...enable some and while disabling others...finally in a last ditch effort I uninstall and re-installed all the plugins...but still... I can no longer get the vids to play and I get the same message.

Please Help.

Thanks in Advance.

Hello,

Could you provide link to page where we can see the problem?

Regards,
ARI Soft

Thanks for the quick response. But I was finally able to get things going with the SLBx. I believe it was a browser resource issue and not the module itself.

Again thanks for responding to my post.
