## ARI Sexy Lightbox

Posted by john.mcenallay - 2011/07/27 03:26

---

Hi

I am attempting to open an external URL from a thumbnail image and have used the suggested code from the forum namely"

```
{arisexylightbox activeType="rcontent" width="900" height="750" url="http://www.dolphincruises.co.nz/"}{/arisexylightbox}
```

Which works fine, however if I set the width of the thumbnail with width="300" height="176" the lightbox just shows the thumbnail instead of the external URL. Is there a different syntax for this?

This is a sample of the page:

[http://www.placesnparadise.co.nz/staging/index.php?option=com\\_content&view=article&id=73&Itemid=73](http://www.placesnparadise.co.nz/staging/index.php?option=com_content&view=article&id=73&Itemid=73)

the First Thumbnail for Bay of Islands Tours has not width setting, and the second one has the width set.

On further investigation I find that by disabling ARI Sexy Thumbnails they both work, If I leave this enabled then not only does the above happen but clicking any Thumbnail image on the site results in it opening in a lightbox rather than opening the URL assigned to the href around the image.

=====

Hello,

Set "Order" parameter to "First" for "System - ARI Sexy Thumbnails" plugin. If it doesn't help, could you provide temporary access to your J! backend by email that we can investigate the problem?

Regards,  
ARI Soft
