
Why do I received this error?

Posted by fazbiz - 2011/08/10 22:13

Fatal error: Out of memory (allocated 66584576) (tried to allocate 15488 bytes) in
/home/Isisyste/public_html/modules/mod_arisexylightbox/includes/kernel/Image/Asido/class.driver.gd.php on line 448

This error appear when I put more than 10 images in 1 folder? Can anyone help me?

Hello,

Try to install PHP Settings plugin and increase "memory_limit" PHP option.

Howdy,

I'm also getting this error message;

Fatal error: Out of memory (allocated 169082880) (tried to allocate 18432 bytes) in
/home/tsacamp/www/www/Joomla/modules/mod_arisexylightbox/includes/kernel/Image/Asido/class.driver.gd.php on line 448

I went ahead and tried the fix listed here and installed the PHP Setting plugin and set it up as follows;

```
pcre.backtrack_limit=-1
memory_limit=200M
max_execution_time=300
upload_max_filesize=200M
```

But still nothing is working right. My only work around right now is to disable "System - ARI Sexy Thumbnails" through the Joomla plugin manager.

Any ideas?? Did I set something up wrong? I did install everything in the order that was given in the readme file

Hello,

It seems hosting provider disable ability to change PHP parameters. You can contact hosting provide supports and ask to increase "memory_limit" PHP parameter.
