
div class=asexybox-shadow is in the way.

Posted by tlwebdesign - 2011/08/18 21:50

Hi guys,

i got a bit of a problem, ok here's the link to the website: <http://www.tlwebdesign.nl/huisstijl-portfolio.html>

im using the simple image gallery to display my portfolio. I put the stuff inside a table so i get everything nicely ordered and a nice thin border around it.

But the image is not lined out in the middle due to a div that is just above it. about i guess 10px high. when i use firebug to search for it i see this div in there. " Å "

But theres no text in it, just a space as you can see. Ok now the fix i need: I need this thing removed since i want the image to be nice in the middle of the table i put everything in. Can someone help me on how to remove the thing?

Any help is greatly appreciated!

Just to be complete: running mac osx lion with firefox 6.0. (Dont think you need it but still)

Thanks in advance

Tom van der Laan

Hello,

Do you use "ARI Sexy Lightbox" module or "System - ARI Sexy Lightbox Anywhere" plugin or enter code manually? HTML code of the gallery looks incorrectly.

Hi

Thanks for the fast response. It always surprises me how good your support is! well worth my money for sure.

uhm i'm using System - Sexy Lightbox Anywhere. The code is what i used on another site in a module. But now i'm using it in an regular article.

This is the code i enter (WYSIWYG Disabled)

```
{arisexylightbox activeType="imglist" dir="images/portfolio/huisstijl/veronconsultancy/" thumbWidth="450"
thumbHeight="150" thumbPath="/thumb/veronconsultancythumb.jpg" descrFile="veronconsultancy.csv"}}{/arisexylightbox}
```

Thnx

The code looks correct. Could you provide temporary access to your J! backend by email that we can investigate the

problem?
