
Ari Sexy Lightbox Integration

Posted by cmsdesign - 2011/08/24 21:15

I just purchased the Lightbox extension hoping to integrate it with the Image Slider module. I've enabled all the plug-ins, and chosen the Lightbox integration in the drop-down menu (seemed simple enough), but nothing happened. I get the slideshow, but there is no opportunity to click on the image to pop up. Is it a Joomla 1.7 issue?

Never mind! Figured it out. Love both the original extension and the Lightbox as well! Thanks.

Hello,

Check that "Disable mouse click" parameter is set to "No" and slider images associated with links in INI file or "Use thumbnails" parameter is set to "Yes".

Regards,
ARI Soft

It was the "thumbnails" parameter for me, but I'll check the others as well. Now I'm trying to make the lightbox images pop up larger. Is this determined by the size of the original image? Or is there a parameter setting?

The lightbox shows original images.
