Integration with RSFORM

Posted by sandeshsindiri - 2011/08/29 16:36

_____

Hi,

My Website is www.truedharma.com

In my website, if you click "Ask-a-Monk" in menu, you will get a light box with RSFORM in it. Currently this is implemented using RokBox. I want to implement using ARI Sexy Lightbox. I want to know, how this can be done.

Please also consider that, if the form is incomplete or incorrect, the validation messages should be populated in the lightbox and after the form is submitted, the thank you message should also appear in the lightbox. This is how it works currently with Rokbox. If required, you can submit some data in the form to understand the functionality.

Regards,
Sandesh

_____

Hello,

Install and enable "System - ARI Sexy Links" plugin and populate "Elements CSS selectors" parameter with the next value:

".menutop LI A"|width=500&height=350

Regards,
ARI Soft

Than you very much. Its working. But one small concern. When I click Ask-A-Monk in www.truedharma.com, the ARI Sext Lightox Popup is opening, but it is having my website background. I dont want any background. How can I do that?

Regards and Thanks,
Sandesh

_____

The background is defined in site template CSS file (style2.css) file. If you want to remove it from form page, open component.php file from site template and add the next code between and tags:

body {background-image: none !important;}

PS: If you wish, you can provide temporary access to your J! backend by email and we will help to modify component.php file.

Regards,
ARI Soft
