
Nav buttons & image appearing on their own--WHY?

Posted by myinterwebz - 2011/09/10 16:54

I have ARI Sexy Lightbox Lite in Joomla 1.6. In an Article, I have inserted the code for two images that when clicked open a lightbox with inline HTML. It works great, but also creates this third image (a duplicate of the first) that opens to a blank lightbox titled "Sample Content." In addition, these nav buttons are generated within the article...these buttons take me back and forth between the images I put in and the "Sample Content" image. I do not know how this is happening since the only code I put in is as follows:

text

text

The page I'm referring to is here: <http://southtexasfenceanddeckrestoration.com/products.html>

I do not want the third image nor the nav buttons. I just want a simple Article page with two images. Please advise.

THANK YOU!

Hello,

Could you specify what image you mean and could you provide a screenshot where we can see the problem?

Regards,
ARI Soft

Hello,

Due to issues uploading an appropriate file, I cannot provide screen shots.

The image that I want to get rid of is the "Deck Stain" image. If visitors click on the Deck Stain image, it opens an empty lightbox titled "Sample Data."

Thank you!

The lightbox is not empty, according to site template styles loaded content have white text color. Add the next CSS rule

to a site template file to change text color:

```
#SLB-Image  
{  
  color: #000;  
}
```

Regards,
ARI Soft
