
Video link fails in slideshow plugin...

Posted by JanBengt - 2011/09/19 12:24

Hi,

I recently purchased the ARI Sexy Lightbox, hoping it should work well together with another Joomla plugin, YT Content Slideshow. To be more precise, I needed a nice-looking lightbox for a number of YouTube links, located in the description area of the YT slideshow content. However, the links fails to work.

I'm using the ARI Sexy Lightbox system plugin and the sample YouTube html tag in your manual. The latter is inserted in a Joomla article that contains one of the slideshow items (image and description text). When displaying the slideshow and clicking the link, the rel attribute seem to be ignored in this context and I'm sent to the YouTube site.

When using exactly the same link in a standard Joomla article, the video opens in the lightbox just as it should. Is there something I can do to make sure the rel attribute take effect when used this way? Or are there alternate ways to use the lightbox that I can try?

My Joomla version is 1.6.4

Regards
/Jan

Hello,

Could you provide link to a page where we can see the problem?

The extension didn't work with "YT Slideshow" because slideshow extension creates new HTML element for description when changes slide. We have modified /modules/mod_ytc_content_slideshow/tmpl/theme2.php file to add support of "ARI Sexy Lightbox" extension.
