## Lightbox Behind Video Posted by sandeshsindiri - 2011/09/21 20:58

Hi,

My website is www.truedharma.com . In the homepage of my website there is a Video, which plays in flowplayer. Also, there is an image in the section "Kirtan: The Science of Sacred Sounds". If you click that image, it opens in ARI Sexy Lightbox.

Now, the problem is - If you play the video first and then click on the image, ARI Sexylighbox stays in the background of that Video.

Can you please help me to resolve this.

Thanks and Regards Sandesh

Hello,

"wmode" parameter of tag for FlowPlayer is set to "window". Change it to "transparent" and the video will be shown under the lightbox.

Regards, ARI Soft
