Module (Flickr) settings not saved

Posted by thni - 2011/09/22 08:27

_____

I bourght this module yesterday and tried to make a module showing my flickr photos.

I choose type "Flickr gallery" and entered my Flickr API key.

I choose source "User photosets" and entered my userid.

All other fields have deafult values.

When i save the module (Module successfully saved), joomla empties all the Flickr input fields.

The module is published in the frontend with the title, but no photos...

Please help :huh:

_____

Hello,

Check that "System - ARI Extensions" plugin is installed and enabled. This fact is described in readme.txt file from extension's archive.

Regards,
ARI Soft

Ooops, must have missed that one when i installed... :blush:

Thanks for clearing that out..

However, the settings are now saved but there's still no photos in the frontend - only a text saying "{$emptyText}".

My photos on Flickr are all public.

I can provide you with at temp username and pw for my site if you wish.

_____

Could you send link to a page where you try to use the extension and temporary access to your J! backend by email?

Regards,
ARI Soft

Any resolution to this problem? I have same issue... getting {$emptyText}. All plugins are enabled and the group I am wanting to display is not private.

Hello,

If you use a plugin, what plugin code do you use? If you use a module, could you provide screenshot(s) of module settings page? You can send it by email.

Regards,
ARI Soft
